Question	Answer	Marks	Partial Marks	Guidance
9	36π cao	**3**	**B2** for answer 113 or 113.0 to 113.1… or an answer in terms of π which rounds to 113 or **M1** for correct first step for finding *d* or *r* e.g. $72 + 72 = d^2$ oe $72 = r^2 + r^2$ oe or $\left(\frac{\sqrt{72}}{2}\right)^2 + \left(\frac{\sqrt{72}}{2}\right)^2 = r^2$ oe $\sqrt{72} = \frac{r}{sin45}$ oe $\frac{1}{2} \times r \times r = \frac{72}{4}$ oe	Ignore inaccurate values for 6 or 12 if recovered by accurate 36. B2 for: answers $6^2\pi$, 36π = 113, 36π in the working and 36 as the answer e.g. $\sqrt{(\sqrt{72})^2 + (\sqrt{72})^2}, \sqrt{(\sqrt{72})^2 \times 2}, \sqrt{144}, d = 12$ $\sqrt{\left(\frac{\sqrt{72}}{2}\right)^2 + \left(\frac{\sqrt{72}}{2}\right)^2}, \sqrt{\left(\frac{\sqrt{72}}{2}\right)^2 \times 2}, r = 6$ $(\sqrt{72}) \times cos45$ $\sqrt{\frac{72}{2}}, \sqrt{36}, r^2 = \frac{72}{2}$ For $\sqrt{72}$ allow $6\sqrt{2}$ or 8.49 or 8.485… For $\frac{\sqrt{72}}{2}$ allow $3\sqrt{2}$ or 4.24 or 4.242 to 4.243
10	1.4 oe	**1**		Allow $\frac{7}{5}$
11(a)	$3x(8x – 3y)$ final answer	**2**	**B1** for $3(8x^2 – 3xy)$ or $x(24x – 9y)$ or $3x(8x – 3y)$ seen then spoilt	Condone omission of final bracket for 1 or 2 marks
11(b)	$7(3x + 2y)(3x – 2y)$ final answer	**3**	**B2** for $(21x + 14y)(3x – 2y)$ or $(3x + 2y)(21x – 14y)$ or $7(3x + 2y)(3x – 2y)$ seen then spoilt or **M1** for $7(9x^2 – 4y^2)$ or $[...](3x + 2y)(3x – 2y)$	Condone omission of final bracket for all marks
12	5.6 oe	**3**	**M1** for $y = k\sqrt{x + 1}$ oe **M1** for $y = \textit{their } k\sqrt{1.56 + 1}$ oe	Allow $\frac{28}{5}$ for 3 marks e.g $10.5 = k\sqrt{8 + 1}$, implied by $k = 3.5$ Method may be in one step e.g. $\frac{10.5}{\sqrt{8+1}} = \frac{y}{\sqrt{1.56+1}}$ oe
