Question	Answer	Marks	Partial Marks	Guidance
6(a)	$\frac{16}{y}$ final answer	2	**M1** for $\frac{240u}{15uy}$ or better	e.g $\frac{240}{15y}$ For M1, accept $\frac{240\times u}{15\times u\times y}$ or $16\times\frac{1}{y}$. NB $\frac{3600u^2y}{225u^2y^2}$ is M0.
6(b)	x^3+4x^2+x-6 final answer	3	**B2** for correct unsimplified expansion of three brackets or for simplified four-term expression of correct form with 3 terms correct in final answer or **B1** for correct expansion of two given brackets with at least 3 terms out of 4 correct	B2 for $x^3 + 2x^2 + 3x^2 + 6x - x^2 - 2x - 3x - 6$ $x^2 + 2x - x - 2$ x counts as two terms $x^2 + 3x - x - 3$ $2x$ counts as two terms $x^2 + 3x + 2x + 6$ $5x$ counts as two terms If in a random list only accept if four consecutive terms are correct. MR max B2 for correct answer provided not a misread of –.
6(c)	$\frac{-1\pm\sqrt{1^2-4(2)(-5)}}{2(2)}$	M2	**M1** for $\sqrt{1^2-4(2)(-5)}$ or better or for $\frac{-1+\sqrt{p}}{2(2)}$ or $\frac{-1-\sqrt{p}}{2(2)}$	For M2 allow $\frac{-1\pm\sqrt{1+40}}{4}$ No recovery for short fraction line or for short square root unless seen in working Length of fraction line must cover ± sign Length of root must cover – sign
	–1.85, 1.35	A2	**A1** for each or –1.851 to –1.850 and 1.350 to 1.351 or –1.9 and 1.4 or –1.35 and 1.85
